Hamilton Beach Commercial HMD1000 &

Electro Freeze BM-series Mixer Comparison

The HMD1000 mixer is similar in form and function to the Duke BM-series mixers. The similarities include a ¾ horsepower motor, a rotating agitator, a variable speed control dial, foot switch, splash guard. The differences include quieter operation, digital-based speed control, smooth molded cabinet, removable spill tray, molded integral splash guard and shield for to be easily removable, programmable pre-sets for future development. The agitator and direction of rotation is designed for safety.

While the operation of the HMD1000 is similar to the current BM-series mixers – mixing Blizzard® Treats will be different with the HMD1000. There will be an 'adjustment period' for most crew members. Use current mixing guidelines and mix at "30" for DQ® shakes and "100" for Blizzard® Treats. Mixing time may be faster or take longer, depending on individual technique. This should be simple, but it may take a little practice for crew members to feel comfortable.
