

K-100 SERIES

HOT WATER SANITIZING MULTIPLE-TANK RACK CONVEYOR WAREWASHERS

Meiko's K-100 rack conveyor warewasher combines state-of-the-art advanced features with economical and reliable operation. Powerful 3 HP prewash, wash and recirculating rinse pumps, combined with computer-positioned wash arms with varying spray angles and offset jets, ensure outstanding water coverage and consistent cleaning. Prewash, wash and recirculating rinse arms are pre-assembled into easily-removed manifolds, and feature slotted, concave nozzles (which minimize clogging) and captivated end caps (which can't be lost during cleaning).

Other standard features include fully automatic operation, double-wall insulated construction, a unique external lever-operated drain system, low voltage control circuit, and standard vent cowls with double curtains to reduce splash-out. As with all products synonymous with the name "Meiko," engineering excellence, manufacturing quality and performance come to the forefront in the K-Series rack conveyors.

Exclusive Features:

- **Synchronized side-drive dual rack rail pawl-bar system** ensures complete water coverage from every angle, even the bottom of the rack
- **Large, insulated front doors** are spring-loaded to open easily and STAY open, without latching
- **Computer-positioned wash and recirculating rinse arms** in easily-removed manifolds. Manifolds are stainless steel with a unique interlock system to eliminate high-wear O-rings
- **Concave, slotted nozzles** minimize clogging. Nozzles are computer-positioned at varying angles to maximize water coverage over all areas of the ware
- **Powerful 3hp prewash, wash and recirculating rinse pumps** are 50% more powerful than the industry standard for outstanding cleaning
- **Large separation** between recirculating rinse and final rinse (14" upper, 15" lower) avoids splashing of soiled water onto sanitized ware
- **Front-sloping tanks** for complete drainage and easier cleaning
- **External, easily-operated lever drain system** makes draining fast, safe and simple

K-100 SERIES UTILITY CONNECTIONS

D Drain

2-15/16" (75mm) OD vertical, gravity-fed drain outlet (HDPE piping). Recommend placement directly above 4" floor drain. Additional piping to drain (if so required) to be supplied by customer.

Connection is 9-5/8" (244mm) AFF. If using optional 2" NPT adapter, connection is 8-1/2" (214mm) AFF. Refer to **Detail View: Drain** for suggested connection.

Single electrical connection - machines without internal booster heater

- Single terminal block inside control box (4-wire with ground - no neutral).

Dual electrical connections - machines with internal electric booster heater

- Two terminal blocks inside control box (4-wire with ground - no neutral).

- 1 - Machine electrical supply
- 2 - Booster heater electrical supply

Electrical supply (or supplies) should be routed into control box through strain relief(s) on rear of control box. Incoming leads must be appropriately sized for electrical supply. Individual disconnect with lockout/tagout strongly recommended (provided by customer).

Connection for standard-height machines is 5' 4" (1626mm) AFF. Connection for tall hood machines is 6' (1829mm) AFF.

Refer to utility chart on Page 5 for electrical load information.

Vent connection - machines with optional vent cowl collars

Refer to **Detail View: Vent** for suggested connection.

The waste air connection must be corrosion-resistant and frost-free. In particular, provisions must be made to prevent air temperatures of 32°F/0°C or colder from reaching the machine at any time. A provision for draining moisture from the waste air pipe is strongly recommended.

- Load end - 200 CFM
- Unload end - 350 CFM
- Total - 550 CFM

H Hot water connection - machines without internal booster heater

3/4" NPT female pipe connection is 9-1/2" (241mm) AFF.

- Temperature 180°F (82°C)
- Pressure 15-25 PSI
- Initial fill 69.5 U.S. gals. (263.1 liters)
- Consumption: Refer to utility chart on Page 5
- Recommended hardness 1-6 grains/U.S. gal.

W Water connection - machines with internal booster heater only

- Consumption: Refer to utility chart on Page 5

CR Condensate return connection - steam-heated machines

3/4" NPT male pipe connection is 10-1/2" (267mm) AFF. Condensate line MUST be pressure-free.

DETAIL VIEW: VENT

Machines equipped with optional vent cowl collars may be installed underneath a ventilation hood, or may use "pant leg" ventilation ducts (to be supplied by the customer). To determine the dimensions of the duct, first determine how they will be installed:

- **Duct sleeved outside collar**
Inside dimensions of duct: 4" W x 16" D (102 x 406mm).
- **Duct sleeved inside collar**
Outside dimensions of duct: 3-3/4" W x 15-3/4" D (95 x 400mm).

The duct must not interfere with the adjustable baffle, as shown.

Duct sleeved outside collar (recommended)

4" x 16" (102x406mm)
inside dimensions

Duct sleeved inside collar (if required)

3-3/4" x 15-3/4" (95x400mm)
outside dimensions

DETAIL VIEW: DRAIN

The machine is equipped with a 2-15/16" (75mm) OD vertical, gravity-fed drain. If possible, the machine drain can simply be positioned directly above a 4" floor drain.

If a floor drain is not in the correct location, or if local codes require a trap, a 2" indirect drain line may be attached using the supplied boot, clamp, and 2" NPT male adapter.

Choose a piping material that:

- Complies with any applicable local and national codes
- Is rated for use with water temperatures up to 180°F/82°C
- Is rated for 3-12 pH to accommodate detergents and rinse aid in the drain water

DETAIL VIEW: TABLING

Inside view

Check that the table lip overlaps BOTH the inner and outer panels.

Use silicone sealer between the table lip and the machine to prevent leakage.
